40 mm

Certifications:

KTW · WRAS · AS/NZS · NSF · ACS · WaterSense · WaterLabel

Advantages

Reduces temperature fluctuation

EcoFlow Tech valves are designed to maintain stable water temperature, even with pressure changes in the hot and cold water lines. This is especially useful at low flow rates. Unlike standard setups where flow limiters can cause sudden temperature shifts, EcoFlow provides consistent comfort and safer use.

Technology for any cartridge

EcoFlow is based on a ceramic system that uses multiple small openings, allowing it to be integrated into almost any cartridge in our catalog. This design ensures better water control and safety by maintaining temperature stability, even when pressure drops occur in one of the inlets.

Improved flow-rate vs handle-stroke

Unlike other solutions with limited control zones, EcoFlow uses the full lever stroke to regulate the flow more progressively and effectively—offering a better feel and greater precision in everyday use.

Optimised for:

Designed to help manufacturers meet certifications like WaterSense and WaterLabel, EcoFlow Technology supports sustainable faucet development without compromising user comfort.
