

# Termaclick Cartridges

35 mm, C/D

35 mm, S/D

35 mm, S/D, Mirror

Certifications:

KTW · WRAS · AS/NZS · NSF · ACS

## Advantages

### Safety Click at 38 °C\*

The cartridge includes a click at 38°C\* to indicate the comfort temperature and prevent excessive heating. This helps avoid accidental burns, especially for children, making daily use safer for the whole family.

\*with a hot water of 63 °C & a cold water of 13 °C (EN 817)

### SedalOX Ceramic Set

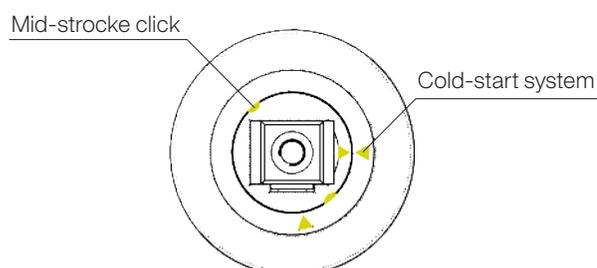

Thanks to our exclusive SedalOX ceramic technology (made with 96% pure alumina and developed entirely in-house) Termaclick ensures higher resistance to wear, smoother operation, and a longer lifespan even under demanding conditions. This material is specially engineered to maintain performance over time, reducing maintenance needs and improving overall reliability.

### Energy Saving

The Termaclick cartridge contributes to energy savings in two key ways:

- It features a cold-start system, delivering only cold water when the lever is in the center position.
- A mid-stroke click at the theoretical 38°C comfort point helps prevent unnecessary hot water use, reducing energy waste beyond the optimal temperature.

### Glide Feel Technology

This technology ensures a consistently smooth and controlled lever movement, providing a high-quality user experience from the very first use. By optimizing internal friction and enhancing component alignment, Glide Feel improves precision and reduces effort during operation—even under demanding conditions.
